UCLA Solid Organ Transplant Symposium 2019: Celebrating the Past and Embracing the Future: UCLA's Multidisciplinary Team Approach to Transplant

Course Description
The UCLA Solid Organ Transplant Symposium is a one-day conference coordinated through UCLA Health Department of Transplant Services; the UCLA Office of Continuing Medical Education; and the UCLA Transplant Multi-Disciplinary teams. The goal of this program is to provide a forum of UCLA Transplant multidisciplinary team experts to highlight trail blazing experiences, celebrate clinical accomplishments of the past and identify current advancements and trends in pediatric and adult solid organ transplantation.

Target Audience
The target audience for this symposium is health care professionals who provide care for patients pre- and post-transplant including: Heart, Lung, Liver, Kidney, Pancreas and Intestinal/Multivisceral transplantation. The symposium content is designed for local community physicians, transplant nurses, transplant nurse coordinators, administrators, nurse practitioners, pharmacists, social workers, dietitians and all members of the transplant team to guide and improve their clinical practice and patient management during all phases of transplantation.

Learning Objectives
Following completion of the course, attendees should be able to:
• Educate patients and their caregivers within the multidisciplinary model using best practices to optimize transplant outcomes
• Implement shared care practices and collaboration within the community utilizing telemedicine and outreach community programs
• Provide tools for the transplant recipient, living donors, and their caregivers to support their success for the duration of the pre-transplant and post-transplant periods
• Recommend new treatments that prolong a patient’s ability to thrive without transplant and maximizing alternative, life prolonging therapies
• Recognize perspectives of the donor family and of the Organ Procurement Organization in the decision-making process to donate the gift of life
• Recognize the components of successful transitional care programs and when they should be implemented
